

HealthConnect Week 7: Evidence and Supporting Files Manifest

Maps each Week 7 submission requirement to the actual file that satisfies it. Use this as the packing list when organizing the Google Drive folder and GitHub commit. All paths are relative to the week 7 folder.

Testing & Validation Evidence

Evidence	File
Full test table (KPI reconciliation, KPI 5, segment tests, distance CI and redundancy checks, double-risk investigation)	reports/HealthConnect_Week7_Analytics_Testing_Refinement_Report.pdf (Section 3)
Executed, reproducible testing notebook (all new cells run with real outputs)	notebooks/HealthConnect_Week7_Testing_Refinement.ipynb
Script output for KPI 5, distance in-band gaps and distance model check	reports/test_evidence/kpi5_and_distance_checks_output.txt (script: scripts/week7_kpi5_and_distance_checks.py)
Testing record in the brief's 11-field format (Section 12)	reports/Week7_Testing_Validation_Record.pdf and .csv
Dashboard slicer test: expected values computed from the data (fill the actual column in Power BI)	reports/test_evidence/dashboard_filter_expected_values.csv (script: scripts/week7_dashboard_filter_expected_values.py)
Power BI steps (chart refinement + slicers)	outputs/dashboard/Power_BI_Refinement_and_Slicer_Steps.md
Baseline dashboard screenshot (what was tested against)	outputs/dashboard/HealthConnect_Week6_Dashboard_baseline.png
Distance-chart refinement mockup (before/after)	outputs/dashboard/distance_chart_refinement_mockup.png (design reference, not the deliverable evidence)

Still needed before submission: a screenshot of the live dashboard after the distance-chart refinement is applied in Power BI, saved in outputs/dashboard/. This is the actual after-image. The mockup is a design reference only.

HC-POD Cross-Track Evidence

Evidence	File
Full cross-track record (dependency, test, finding, action, retest, evidence, impact)	reports/HealthConnect_Week7_Analytics_Testing_Refinement_Report.pdf (Section 6)
Raw retest numbers, Random Forest (segment size/rate, CV ROC-AUC, feature importance, original vs corrected threshold)	reports/cross_track_evidence/crosstrack_double_risk_flag_retest_evidence.csv
Exact Week 6 candidate retest, Logistic Regression (three flag variants; Week 6 CV method and 5 × 5 repeated CV)	reports/cross_track_evidence/crosstrack_double_risk_flag_exact_candidate_retest_evidence.csv, with the run log double_risk_exact_candidate_test_output.txt (script: scripts/week7_double_risk_exact_candidate_test.py)
Earlier preliminary check on a simplified two-feature Logistic Regression (six setups), superseded by the exact-candidate test	reports/cross_track_evidence/crosstrack_double_risk_flag_lr_retest_evidence.csv, with the run log double_risk_lr_test_output.txt (script: scripts/week7_double_risk_lr_test.py)
Executed retest code	notebooks/HealthConnect_Week7_Testing_Refinement.ipynb (Sections 5 and 5b)
Package prepared for the DS track collaborator (note, segment comparison, retest CSVs including the exact-candidate result, delivery record)	handoff/ds_track_collaborator/ (screenshot of the sent message goes in its evidence/ folder)

Still needed: send handoff/ds_track_collaborator/ to the DS track collaborator and save a screenshot of the message (and any reply) in its evidence/ folder. That screenshot is the proof the information was provided.

Supporting Files

Item	File / Status
Notebook	notebooks/HealthConnect_Week7_Testing_Refinement.ipynb
Scripts	scripts/week7_kpi5_and_distance_checks.py, week7_double_risk_lr_test.py, week7_double_risk_exact_candidate_test.py, week7_dashboard_filter_expected_values.py, week7_build_handoff_package.py
Data (read-only copies from Week 6)	data/processed/healthconnect_appointments_prepared.csv and kpi1 to kpi4 CI tables
Dashboard (baseline)	outputs/dashboard/HealthConnect_Week6_Dashboard_baseline.png
Dashboard (refined)	Pending: export after applying the Power BI fix
Report	reports/HealthConnect_Week7_Analytics_Testing_Refinement_Report.pdf
Project Summary	reports/HealthConnect_Week7_Project_Summary.pdf
Before/after (distance chart)	outputs/dashboard/distance_chart_refinement_mockup.png (design reference) + pending live before/after screenshots
Repository README	README.md

Not yet produced

- Live dashboard export after the distance-chart fix
- Slicer test results (actual values from Power BI)
- Screenshot proving the handoff was sent to the DS track collaborator
- GitHub commit + README update for Week 7 (README links for the Drive folder and social posts to be added after submission)
- Google Drive folder upload itself
